- French (Working Proficiency)

RELEVANT EXPERIENCE

FRONT-END DEVELOPER, *TREASURED INC.*   *DECEMBER 2018 – MAY 2019*

- Developed front-end user interfaces using **JavaScript** frameworks, **HTML** and **CSS** to improve the overall design of the project, creating a more user friendly interface.
- Created 3D animated models in **Unity** to be used on the Magic Leap augmented reality headset.
- Took on a leadership role during the project to organize our ideas, ensure that everything was submitted by the deadline and present the improvements to the CEO.
- Presented final project to hundreds of people at the Schulich Startup Night event as well as at a startup event located at ySpace, giving more exposure to the company.

PROJECT BASED LEARNING

DUCKING

- Created a Google Chrome extension using **JavaScript**, **HTML** and **CSS** to help consumers be more aware of how the clothes they buy online affect the environment.
- Used data scraping techniques to gather information about companies' carbon footprint and presented the user with a sustainability rating for the company, more environmentally friendly options, and a points system to incentivize sustainable purchases.
- Made to solve the ElleHacks 2020 sustainability and climate change challenge.
- https://github.com/zhou-ziqi-214746283/elleProject

ELITE EATS

- Designed and created a website using **JavaScript, HTML**, **CSS** and different **API**s to create an app to scan food items, alert the users if the items are nearing expiry, and lists the ingredients to make sure there are no allergens in it**.**
- Submitted for UofTHacks 2020.
- https://github.com/Dorps/dorps.github.io

ADVENTURE GAME

- Created a text-based RPG using **Java** that allows the user to be a virus that has a goal of infecting the world.
- Users can interact with objects in the by picking them up and storing them in their back pack to be used later.
- Submitted as a final project and received a 96%.
